b) Enabling Multi-Factor Authentication to Secure Your Access

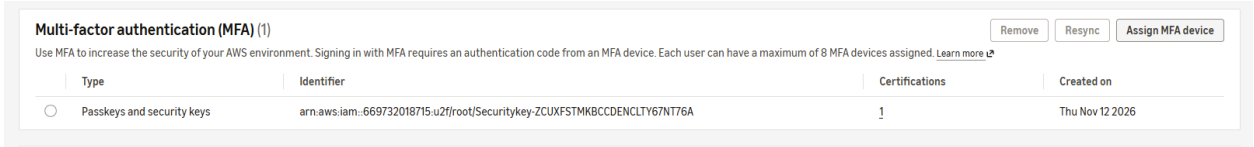

Step1: Open and sign in to AWS using root user

Step 2: click on the profile or username

Step 3: Click assign MFA

Step 4: Enter device name and select passkey

MFA device

Device options

In addition to username and password, you will use this device to authenticate into your account.

Passkey or security key

Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.

Authenticator app

Authenticate using a code generated by an app installed on your mobile device or computer.

Hardware TOTP token

Authenticate using a code generated by Hardware TOTP token or other hardware devices.

Passkey display name - *Optional*

This name will be shown when signing in using passkey. The default suggested name can be customized if needed.

Use default Passkey display name

669732018715-root-Abhishek-Laptop

Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

Cancel Next

Step 5: MFA is created

My security credentials Root user Info

The root user has access to all AWS resources in this account, and we recommend following best practices. To learn more about the types of AWS credentials and how they're used, see AWS Security Credentials in AWS General Reference
